Jana Aburas

Ottawa, ON | 514-929-2188 | jaburas01@gmail.com | github.com/Jaburas

Projects

Ottawa Pathfinder | *React, TypeScript, OpenStreetMap*
- Built a React and TypeScript route planner over 80,000+ Ottawa intersections from OpenStreetMap
- Computed shortest routes with Dijkstra's algorithm on a custom binary min-heap, plus BFS and DFS
- Snapped any clicked map point to its nearest intersection using Haversine distance to start a route

ScamFree – Phishing Detection Tool (Hackathon) | *Node.js, JavaScript, REST APIs*
- Flagged phishing in Gmail with a Chrome extension (Manifest v3) backed by Node.js REST endpoints
- Trained a Naive Bayes classifier on 500 labeled emails to separate phishing from legitimate mail
- Reduced false positives by debugging the classifier until legitimate emails stopped being flagged

Community Chat Bot Platform | *Python, Ollama, Linux*
- Served 3,400+ members (about 100 concurrent) with a self-hosted local LLM chat bot in Python
- Sustained 3 months of uptime on Linux by fixing reconnect and API rate-limit failures found in logs
- Ran up to 10 concurrent games across two object-oriented game bots with 10+ commands each
- Selected the bot's model by writing its prompts and comparing local LLMs on Ollama

Experience

Makerspace Facilitator, Carleton University (FED Makerspace) – Ottawa, ON Sept 2026 – Present
- Trained 50 students on electronics benches, 3D printers and laser cutters through safety inductions
- Reviewed student CAD files (SolidWorks, Fusion 360) and gave Design for Manufacturing feedback
- Calibrated and troubleshot lab equipment; tracked consumables and logged restock requests

Electronics Repair Technician, Self-Employed – Ottawa, ON May 2025 – Present
- Restored 70+ phones, consoles and controllers by diagnosing display, battery and stick drift faults
- Replaced potentiometers with board-level soldering, verifying every repair with gamepad test software

Extracurricular Activities

Automated Job Posting Scraper | *Python, GitHub Actions, CSV* Sept 2026 – Present
- Saved 1–2 hours a day by scraping about 30 new LinkedIn postings daily into CSV with Python
- Ran the scraper unattended every 24 hours as a scheduled GitHub Actions workflow
- Filtered by job title, Ottawa location and a 24-hour posting window to keep only new, relevant roles

Home Server | *Ubuntu, Docker Compose, Tailscale, AdGuard Home* Sept 2025 – Present
- Hosted Jellyfin and Immich with Docker Compose on Ubuntu, reachable remotely through Tailscale
- Blocked about 24% of DNS requests across 12 household devices with AdGuard Home
- Raised wired speed from 80 to 900 Mbps by converting a phone jack into a Cat5e Ethernet drop

Education

Carleton University – B.Eng. in Computer Systems Engineering (Co-op), third year Expected April 2028
Relevant Coursework: Data Structures, Object-Oriented Programming, Operating Systems, Real-Time Systems, Computer Organization & Architecture

Skills

Languages: TypeScript, JavaScript, Python, Java, C++, C, SQL, Bash, HTML/CSS
Systems & Tools: Linux, Git, GitHub Actions, GitLab, Docker Compose, gdb, Jira, Agile/Scrum
Libraries: React, Node.js, REST APIs, pytest, JUnit, SQLite, Pandas, NumPy, Chrome Extension API
